⚠ AWS Config Not Enabled —

Description
No AWS Config recorders are configured, which means that changes in AWS resource configuration are not logged. This hinders security analysis, resource change tracking and compliance auditing.

Remediation
Enable AWS Config in all regions, define the resources you want to record in each region and include global resources (IAM resources)

Compliance
- CIS Amazon Web Services Foundations version 1.0.0, reference 2.5
- CIS Amazon Web Services Foundations version 1.1.0, reference 2.5
- CIS Amazon Web Services Foundations version 1.2.0, reference 2.5
